

SilverTrust — Project 4 | Monday Handoff

Scenario Design | Daria Bystrova & Julian Grandaos

1. Team & Industry

Field	Details
Team members	Daria Bystrova & Julian Grandaos
Our industry	Financial Services
Rationale	AI in credit and loan decisioning involves personal financial data, triggers EU AI Act Annex III high-risk classification, and requires legally mandatory explanations under GDPR Article 22 and CCD II — making compliance genuinely difficult and commercially critical.

2. Scenario Designed for Paired Team (Tech Industry)

Use Case

AI-powered employee productivity monitoring and automated at-risk flagging

Company: PulseWork

HQ	Munich, Germany
Size	~150 staff
Clients	~600 enterprise clients across Germany, France, and the Netherlands
Stage	Series C closed — preparing for Series D
Product	Sells an AI-powered workforce analytics platform. Monitors employee activity (application usage, communication metadata, meeting attendance, task completion) and produces individual productivity scores. Automatically flags at-risk employees to HR and line managers when scores drop below threshold.

Company Problems (Hidden — to be discovered through interview)

- Core product is almost certainly a high-risk AI system under EU AI Act Annex III point 4 (AI in employment decisions) — never formally classified, no conformity assessment, no human oversight mechanism documented
- The at-risk flag is being used by clients to initiate disciplinary procedures and redundancies without any human review step — one Dutch client is currently facing a works council legal challenge the CEO has not disclosed to investors
- GDPR legitimate interest basis is undocumented, no DPIA has ever been conducted, and German works council co-determination rights under BetrVG are likely being violated at client sites

3. People in the Project

Persona 1 — Tobias Hartmann, CEO

Role	CEO & Co-founder — drives growth and investor relations
Goal	Close 200 new enterprise clients in 12 months; prepare for Series D
Hidden pain point	Received a legal letter from a Dutch works council alleging unlawful automated decision-making. Has not disclosed this to the board or investors. Becomes vague and defensive when questions move toward regulation or how clients use the at-risk scores.

Persona 2 — Carla Ferreira, Chief People & Compliance Officer

Role	Owns GDPR compliance programme and client-facing compliance support
Goal	Build a compliance framework that satisfies enterprise procurement requirements — clients increasingly ask for GDPR and EU AI Act documentation before signing
Hidden pain point	Knows the legitimate interest basis is undocumented and a DPIA is overdue. Has written an internal memo recommending they pause the at-risk flagging feature pending legal review — ignored twice by the CEO. Will hint at open compliance questions if asked the right indirect questions.

4. Candidate Use Cases to Discover

- Individual productivity scoring from computer activity and communication metadata
- Automated at-risk employee flagging sent directly to HR and line managers
- Team performance dashboards for senior leadership
- Predictive attrition model flagging employees likely to resign within 90 days

Note for teacher: Hidden pain points are listed above for reference only. The paired team will discover these through indirect stakeholder interviews — they will not be shared with the paired team directly.
